Universal method of circumcision

With LCH single use kit DK-602

When all the instruments are on the operating table, use any compartment as liquid holder (cupule).

Surgery
With 2 forceps pull the foreskin forward and hold it. Use a clamping forceps across the skin above the glans.
With a scalpel cut the skin above the clamping forceps. If heavy bleeding, clamp the small blood vessel with a forceps.
Do a small suturing point around the blood vessel.

Suturing
First you may need to clean the mucous membranes with the Iridectomy scissors.
Scissors iridectomy is inside the kit.
Halsey needle holder and plain micro Adson are provided inside the kit.
Use the appropriate suture (not supplied).

IMPORTANT: according to a new study, Circumcised men may have a slightly lower risk of developing prostate cancer. The World Health Organization already recommends the controversial procedure based on research showing it lowers risk of contracting HIV, the virus that causes AIDS.
